INTERESTING INFORMATION CONCERNING THEM.

**Sponges That Are Hives of Industry With  
Streets and Alleys—How the Sponge  
Reproduces Its Species—Methods of  
the Scientific Culturist.**

It is asserted by a Greek gentleman named Charalampos Chorphios that if proper measures were taken, the sponge fishery of Florida could be restored to the highest productiveness within a few years. Unquestionably a considerable appropriation of money would be required, but it would be trifling compared with the cash value of the augmented crops.

The sponge reproduces its species by means of spores, corresponding to eggs, which are set free in the water. After being "hatched," the young ones swim about for a while, eventually attaching themselves to a rock or other object.

The mature sponge also produces little buds, which detach themselves from the parent and float away to begin life on their own account. The scientific culturist, however, makes use of neither of these natural processes.

The method he adopts is extremely simple, though requiring care and skill. Traveling over the fishing grounds in a boat. He pulls the sponge to the surface with a hook on the end of a long pole. The freshly tackled sponge is not taken out of the water, but is held beneath the surface, while the operator cuts it into pieces.

The knife used is as sharp as a razor so that as little injury as possible shall be done to the tissues of the sponge. The animal is cut up in such a manner that each piece shall retain a part of the original external surface. Finally each fragment is fastened to a bit of stone by a wire and is then dropped to the bottom.

In shoal water an easier and preferable method is to thrust a small splinter of wood through each fragment and stick it into the bottom. In this way a number of sponges are made out of a single sponge. Some of the fragmentary ones die, but the great majority of them survive. For three or four months they seem to be sickly, but at the end of that time they recover and begin to grow with surprising rapidity. The planting must always be done where the sponges will not be rolled about by the waves.

There are thousands of species of sponges, but only half a dozen have any commercial value. There used to be much dispute as to whether these creatures were animal or vegetable, but science has decided them to belong to the former kingdom, being very low down and degraded relatives of the corals.

The fact is that a sponge, like the comb, is a colony of little animals which occupy a sort of apartment house together. The animals are called "polyps" and each of them being both male and female, every individual in the community is in a position to rear a family on its own hook. The sponge in nature is a fleshy and somewhat jelly-like body; only the skeleton figures in commerce. The commercial sponges have horny skeletons, but there are ever so many species which have glass-like or limey frames.

The next time you use a sponge, examine it, and you will find that the surface is covered with holes. Toward the top these holes are much larger. The whole mass is pervaded by a system of channels. When the animal is alive water is kept constantly flowing through these channels by means of minute, hair-like appendages which the little polyps agitate. The water is

**ERINSVILLE.**

We are having abundance, of rain, and the change of weather is the cause of the severe colds, of which so many are complaining of at present.

Mrs. W. Phalen is on the sick list.  
We are pleased to see Mr. Campbell in the village again.

Mr. Kouber, of Napanee gave us a call on Wednesday.

I wonder what happened the dress-makers, they did not remain long.

Miss Hasia Crawford spent Sunday in Crowdon.

Mr. F. Evans went to Montreal with a carload of sheep on Saturday last.

The inspector of this school called last week, finding everything in good condition.

## CENTREVILLE

The Fall Fairs being all past, potato digging is the order of the day. The fair held here on Saturday was one of unusual dimensions. The amount of exhibits and crowd of people in attendance greatly exceeded anything of the kind ever held here. The rain in the evening made it rather disagreeable on the grounds and put the racing track in very poor shape for speeding purposes. Yaker brass band was in attendance on the grounds and also took part at the concert held in the hall in the evening and together the Messrs. Moore and Shorey, of Newburgh, and Mr. J. Graham, of Enterprise, and the Misses Brady, of Sydenham, ably assisted in the completion of the programme.

Visitors:—Mrs. L. and M. McMullen and Mrs. Wm. McMullen and two children, of Rochester, N. Y. Mr. and Mrs. J. Kidd and Miss H. Kidd, Erinsville, and Miss D. J. McCunnell, Raiton.

What has become of our contractors?

KINGSFORD.

Husking-bees and dances are all the rage. Look-out for a big time girls, as this is leap year, take all the good times that's coming.

Mr. and Mrs. Henry Osborne, of North Fredericksburgh spent Sunday the guest of her brother, Albert Bowen.

Mr. and Mrs. James Doyle spent Monday in town the guest of their daughter, Mrs. H. B. McCabe.

Mr. Thomas Winter and wife spent a few days visiting friends in Thurlow and other places adjacent.

Mrs. A. J. Ballance, of Forest Mills, spent Tue day the guest of her friend Mrs. James Doyle.

Miss Jennie Brennan and brothers, spent Sunday the guest of their sister, Mrs. Thor. S. Smith.

Mrs. Daniel O'Hara spent a portion of last week the guest of her brother Mr. William Finnegan, Tyendinaga.

Mrs. David Winter called on her friend, Mrs. Turnbull, Lonsdale Road, on Sunday.

Mrs. Margaret McHenry, of Boundary Road is spending a few months in Watertown.

Mr. and Mrs. H. B. McCabe, of Napanee, spent Sunday with her father, Mr. James Doyle.

I see one of our young gents ride his bike, it's too bad it wasn't built for two. What do you say Gladstone?

The women of Selby and Kingsford Parishes intend forming a Women's Auxiliary, which will take place Tuesday night at Selby Parish. We hope it will be a success.

There will be no service in St. Jude's church, Kingsford, next Sabbath as Mr. Swayne will be absent. The Rev. Arthur Jarvis, of Napanee, will occupy his pulpit and Holy Communion will be celebrated at Selby, at 11:00 a.m.

**Rheumatism Cured in a Day.**—South American Rheumatic Cure, for Rheumatism and Neuralgia, radically cures in 3 days. Its action upon the system is remarkable and mysterious. It acts at once the cause and the disease. Instantly disappears. The first day effects benefits. 75 cents. Sold by A. Wood & Bro. by A.

## COLD STORAGE.

Should Have a Small Cold Storage Plant of Its Own.

Cold storage business is taking rapid proportions. Its development in principal cities of the country is nothing less than phenomenal in a few years. And now cold storage plants are being erected at country shipping points. In some cases they are put up by the farmers themselves, who organize co-operative stock companies and conduct the business on the same general principle that is applied so successfully in co-operative creameries. Most of these cold storage plants in both city and country use chemical refrigeration or other artificial means of creating and maintaining a low temperature. We understand that recent progress in this line makes it possible to build and equip a cold storage plant at comparatively reasonable cost. Of course, where the ice crop is assured, no expensive refrigerating machinery is required, and in such localities cold storage can be provided in connection with a neighborhood ice house. The fact that cold storage is coming into such extensive use in the cities is the best possible evidence that it generally pays to thus hold perishable products until they can be marketed to the advantage. Now, if this is such a profitable business for marketmen, cold storage is equally useful to farmers, and they can utilize its advantages. When put in co-operative method, it is a queer way built on a side hill, always requires ice, and a small cold storage room should be a feature of every farm or home ice house.—Ordinary Farmer.

## Pruning Girdled Trees.

Measure the Inquiry of D. L. G. of Ohio, relative to saving his apple trees, if the season is not the best, I think nine-tenths of the trees will be saved if there is not too much of the bark gnawed from the tree. The time consumed in the operation might more than value the value of the tree. Would advise D. L. G. to proceed as follows:

Partially or wholly encircle the tree at the extreme portions of the injured bark, then peel off all the bark in the space intervening between the upper and lower encircled bark. Measure the length of the space to be covered. Now go to your orchard of older trees that you wish to trim; cut off a limb an inch or more in diameter; measure a portion of this limb so that it will equal the length of space to be covered on the tree. Encircle the limb so as to obtain the length of bark; slit it and peel off. If not sufficient to cover space, take another section, etc. Do with string and cover with grafting wax so as to exclude air and water. If D. L. G. had proceeded as above twenty days ago I think he could have saved a large percentage of his trees.—D. E. D., in Ohio Farmer.

## Yield of Cheese From Milk.

With ordinary milk the yield is about 2.5 pounds of cured cheese for each pound of butter fat in the milk. The per cent. of butter fat in different milks very nearly determines their relative values for cheese making. Prof. Van Slyke of New York found by a series of careful experiments that with milk ranging from 3.4 per cent. to 4.4 per cent., the amount to each pound of butter fat was 2.72 pounds of green cheese, or 2.5 pounds cured for five weeks. It was found the 5 per cent. milk made but 2.4 pounds of cured cheese for each pound of butter fat, but the better quality of the cheese from the richer milk was thought to compensate for the slight difference in quantity. It will be seen that 100 pounds of 4 per cent. milk made 10 pounds of cheese and 100 pounds of 5 per cent. milk made 12 pounds of cheese.

Milk cans. Every one knows that our milk cans are made, not thrown together, and we have 800 more than we want. They have to be sold. Come and get one at Boyle & Son's.

## POULTRY MANURE.

Its Great Value and How Best to Keep and Use It.

Few people know what and how much they lose when they neglect their hen manure, says Farm and Home. Really, nothing is more wasteful and unthrifty than to allow poultry of any kind to roost at night in trees, on fences, or anywhere except over a compost heap, or above a tight board floor. Birds are so constituted that water, of which most of them drink a great deal, passes off through the skin and breath to a very large extent and not through the kidneys, as is the case with the mammalia. The manure of fowls, therefore, contains their urine as a solid excrement. It may be recognized by its white color, and constitutes the most valuable portion of their droppings. The flooring or boards under the henroost should be smooth and close, with cleats around the space upon which the manure will fall. Dry earth, sand even, mixed with land plaster, or sprinkled over after spreading with a solution of sulphate of iron (copperas) should be evenly spread or scattered upon this floor daily; and where there are many hens the whole should be cleaned off and renewed twice a week. The proportion of earth to be added should be two-thirds or three-quarters of the entire bulk. It should be placed in a heap under cover on a cement or brick or clay floor, where it may be shoveled over and mixed with sweepings of the house, feathers, broken eggs, dead chickens or rats or other small animals and such refuse generally, including old hens' nests. It must be kept moist; and in case there is any odor, either of decomposition or ammonia, it must be suppressed by sprinkling with copperas water, scattering plaster or gypsum over the heap, or by the addition of more earth. The best earth for all such purposes is loamy soil. It should be prepared in dry, hot days by sifting upon a floor of boards in the sun, raking it over until thoroughly dry, and barreling for use. Hen manure and wastes of the poultry house, preserved in this way, will in the course of a few months become nearly homogeneous and fine fertilizers for field and garden use. A fresh heap should be started after the first has reached a convenient size; and it is always well to have a stick 1 or 1 1/2 inches in diameter, run into the heap, and going nearly to the bottom, in order to judge of the heat caused by the fermentation, which is constantly going on. This will be known by the heat of the stick when drawn out. When the manure gets too hot, it must be shoveled over and repacked solidly.

## Fine-Tooth Comb Cultivation.

The contest is still on between the old-fashioned and the new-fashioned cultivation of coarse crops. The old fashion says: "You can't make me believe that your new-fangled weeder and smoothing harrows can tell the difference between a corn plant and a weed." The new fashion retorts: "Your dull hoe and soddy corn rows drove the boys off the farm." It is a sort of guerilla warfare upon the outposts of the two systems. The sober seeker after truth would like to see the real issue pointed, for he is tender both of his back and of his young plants. The impartial student of the question will find that the new-fangled machine does not distinguish between species of plants, but it does have a brutal respect for strength, and will tear out the hair-like tendrils of a just-sprouted weed but leave unharmed the deeper rooted corn or potato plant. But it will leave the weed if once well established; therefore "early and often" is a by-law of the process. On the other hand, if the smoothing harrow or weeder can scrape along a piece of sod, a flat stone, or an old corn stub, it appears to enjoy the destruction of a young corn plant equally with crow or chipmunk. A clean surface in preparing for the crop is therefore another necessity of successful use of the new corn culture. With these things in mind the new method can be made a great improvement on the old by any farmer.—American Agriculturist.

through these channels by means of minute, hair-like appendages which the little polyps agitate. The water is thus drawn in through the small holes and ejected from the big holes at the top.

It brings with it animalcules and other food that is required for the support of the colony. The channels above described are the streets and alleyways of the polyp town. If you look at a living sponge in shallow water you will see that there is a continual bubbling above it, caused by the incoming and outgo of the water through the canals.

## B. Agreeable.

The otherwise good man who lacks politeness or assumes a gruff, repellant manner really sacrifices a part of his gifts, for very few people will discover his good qualities under his repulsive manners. Those who do may have patience to bear with him, knowing that his heart is right, but others will judge him by his manners, and finding him disagreeable, will avoid intimacy with him. It is not enough, therefore, to be just or kind hearted, one should also be agreeable in manner, and it requires very little effort to be so. The foundation of agreeable manners is thoughtful consideration of others, or true politeness. This does not imply any necessary sacrifice of frankness and honesty. It does not mean that one shall not contradict or dispute, but it does mean that when a contradiction is made necessary it shall be expressed courteously and in this kind of politeness, for in so far as it helps to make one agreeable, it extends his opportunities for usefulness and helps to make one agreeable. It extends his opportunities for usefulness and helps to give full play to his other good qualities.—Baltimore Sun.

## A Colony of Vegetarians.

At Oranienburg, near Berlin, a colony of vegetarians was started some years ago, and is growing slowly but steadily. Founded in 1893 by seven enthusiasts on the subject, there are at present 47 homesteads where 31 families and 10 single men have built houses and raised their cabbage. Outside of the vegetables necessary for their own food, they have planted 35,000 fruit trees, and 15,000 berry bushes, and have fenced in the entire property with a hedge of hazel nuts. From a financial standpoint they are doing very well because they realize excellent prices for the products of their truck farms, the quality of the vegetables raised by them being the best to be obtained.

## Nothing Like Farming

The farmer who sticks to his trade is the one who is most likely to prosper in the end. As a rule, if a man cannot make money in a business which he does understand, he cannot make it in one which he does not understand.

## Good Advice.

Mr. Ram, sen—"Now, never get excited, my son; when you get in a tight place, use your head."—Harper's Monthly Magazine.

## When to Prune Grape Vines.

Grape vines left unpruned during the summer exhaust themselves by producing an enormous amount of useless wood. In the fall most of the new roots are cut out, and those that remain are allowed very few buds. In these all the strength of the vine is thrown. Some strong-growing varieties, like the Rogers Hybrid, have been known to make 18 to 20 feet of long, slim cane. If pinched back when the vine has grown shoots three or four feet long, the new canes will be thicker and much better prepared to bear a crop the following year.—Rural World.

by A. W. Granger & Bro.

## PICTON.

Picton, Sept. 29.—Lord A. Governor-General, visited Picton the society's annual show this morning the weather was brilliant but as the day advanced the sun shined bright and the day up to 4 p.m. was bright. At an early hour the people from the surrounding country began to arrive in waggon-loads. When the special conveying the Governor-General and party pulled into the C. O. Railway station he came at 10.30 a.m. the streets were lined with thousands of people and hundreds of carriages, all arrayed in holiday attire. The distance from the station to the fair grounds is about a mile. In this mile were ten arches. Each arch had banners with appropriate mottoes, while every few rods a streamer was strung across the street and hundreds of flags were flying from every point of vantage. A guard of honor from the 16th Battalion was in the society's grounds to receive the Governor-General on his arrival. On the arrival of the special his Excellency's suite were met by the directors of the Agricultural Society, whose guest he was. The members of the County and Town Councils' procession was formed at the station, a guard of 100 mounted yeomen to form a body guard. The procession was headed by the 16th Battalion Band. As it moved out into Main street the view was something to be remembered. The street was literally packed. The procession passed down Main street and through the principal residential streets. A very pleasing feature was Piper McIntosh, of Belleville, stationed on the arch in Tecumseh Ward, who played appropriate Scotch airs, and a bevy of young girls who showered bouquets of bright colored flowers on his Excellency's carriage. At the fair grounds, Lord Aberdeen was presented with an address by the Agricultural Society, the County Council and the Town Council, to which his Excellency replied in a very neat speech, expressing himself as highly delighted with his reception, making particular mention of the careful decorations and the novel feature of being attended by a body guard of mounted yeomen of the county.

This memorable visit was brought to a close by the departure of his Excellency's train at 4 p.m., amidst great cheering as the train moved from the station.

Hay Fever and Catarrh Relieved in 10 to 60 Minutes.—One short puff of the breath through the Blower, supplied with each bottle of Dr. Agnew's Catarrhal Powder, diffuses this Powder over the surface of the nasal passages. Painless and delightful to use. It relieves instantly, and permanently cures Catarrh, Hay Fever, Colds, Headache, Sore Throat, and Tonsillitis and Deafness. Sold by A. W. Granger & Bro.

Caraway when once sown, will hold its own by itself, even in land where it has to struggle with grass and weeds. If the soil is light and about the leading plants, so the seeds will fill in fresh soil, there will be no trouble in keeping a stock of it from year to year.

## Fertilizers in Floriculture.

Pansies were treated with muriate of potash and made 896 blooms, and with sulphate of potash made 1,363 blooms. On carnations, sulphate of potash with sulphate of ammonia gave the best results, being closely followed by the same form of potash combined with bone black, while the poorest results were from sulphate and nitrate of potash, sulphate of potash and dried blood and muriate of potash in excess. Observations on carnations for 31 weeks gave the best results for nitrate of potash, sulphate of potash second and dissolved bone black the poorest results. In five experiments made in this line, three have been in favor of bone black, one of sulphate or ammonia and one of nitrate of potash. Sulphate of soda has stood second in each one. The nitrate of soda and muriate of potash in every case where the crop has a tendency to mildew have given poor results, owing, probably, to their power of holding moisture near the surface of the soil. In the growth of the rose, lettuce and carnation a moist atmosphere, or a very moist soil in contact with the plants, especially at night, must be avoided if success is expected, and therefore such fertilizers as nitrate of soda and muriate of potash would aggravate any such condition.—Farm and Home.

# CASTORIA

for Infants and Children.

**THIRTY years' observation of Castoria with the patronage of millions of persons, permit us to speak of it without guessing. It is unquestionably the best remedy for Infants and Children the world has ever known. It is harmless. Children like it. It gives them health. It will save their lives. In it Mothers have something which is absolutely safe and practically perfect as a child's medicine.**

Castoria destroys Worms.

Castoria allays Feverishness.

Castoria prevents vomiting Sour Card.

Castoria cures Diarrhoea and Wind Colic.

Castoria relieves Teething Troubles.

Castoria cures Constipation and Flatulency.

Castoria neutralizes the effects of carbonic acid gas or poisonous air.

Castoria does not contain morphine, opium, or other narcotic property.

Castoria assimilates the food, regulates the stomach and bowels, giving healthy and natural sleep.

Castoria is put up in one-size bottles only. It is not sold in bulk.

Don't allow any one to sell you anything else on the plea or promise that it is "just as good" and "will answer every purpose."

## The Napanee Express

NAPANEE, FRIDAY OCT. 2, 1896.

AFTER all the ado about "French domination" it still remains an undeniable fact that Quebec is the only Province in Canada having a Tory Government.

THREE partizan French translators have been translated out of a job. They can now devote their time and talents without let or hindrance to advocating the Tory cause.

As a sample of the unfairness of the Templar, the alleged organ of the Temperance cause, it is only necessary to allude to its statement that the Liberals cannot claim the credit for the abolition of the sale of liquor in the House of Commons.

THE Interior remarks that the hearty words of praise many a minister receives when he quits a field which his parishioners have made too uncomfortable for him, reminds one of the epitaph a French husband inscribed on his wife's tombstone: "Tear cannot recall her, therefore we weep."

THE proportion of those who can read and write in the several provinces of the Dominion is as follows: Ontario 91.31 per cent; Manitoba 88.76 per cent; P. E. Idnt 83.33 per cent; Nova Scotia 82.77 per cent; New Brunswick 80.76 per cent; British Columbia 74.94 per cent; Quebec 68.04 per cent.

No Autographs for Her.

A certain family, whose home is in the suburbs of London, have in their employ a cook whose ways are invariably so methodical and her cooking so near perfection that, were she to leave her present home, one-half of the customers in the district would

## WISE WOMEN SPEAK.

They Use Only the  
Diamond Dyes.

Mrs. Thos. Miller, St. Helen's, Ont., says: "I have used your Diamond Dyes for many years and am delighted with them."

Mrs. Ryan, Head Lake, Ont., says: "Entirely pleased with Diamond Dyes; they give complete satisfaction. I would not use any other after my experience with the 'Diamond'."

Mrs. A. R. Steeves, Meadow, N. B., says: "Diamond Dyes give lovely colors; they are easy to use and very reliable; I highly recommended them."

Mrs. Charles Gagne, St. Chrysostome, P.Q., says: "Your Diamond Dyes are splendid and should be kept in every home."

Mrs. R. J. Hannah, Poplar Point, Man., says: "Diamond Dyes are a perfect success and no trouble."

Mrs. A. F. Davis, Knowlton, P.Q., says: "I use Diamond Dyes with great success. I can recolor old dresses and make them look as good as new ones."

### THE RIGHT KIND.

Waldo F. Brown Gives His Experience  
With Chicken Coops and Houses.

After over fifty years' experience in raising chickens, I have this year made a lot of coops that give better satisfaction than any I have ever seen, and I would advise every farmer to make some this winter. I believe that it is not exaggerating to say that millions of chickens are lost each year on account of the kind of coops they are kept in. They are eaten up by rats, drowned by rains, or poisoned by accumulated filth. On most farms the chicken coops are temporary affairs, made from old barrels or boxes, or simply a few stakes driven down and the hen crowded into a space entirely too small for her. I bought one patent coop for \$2, and found that I had paid just 1.99 more than it was worth.

Lately I have studied the subject and made a few coops and tested them this year, and while I do not think they cannot be improved, I have found them better than any I have ever seen. In studying the subject, I concluded that the essentials of a good coop were economy, portability, thorough protection from both storms and dampness, also from all enemies, and durability, for the coops should be made so that they will last ten years or more. The coop that I have chosen is made three feet square, with a floor raised six inches from the ground at the front and eight inches at the rear, the object of this slope being to prevent water from running to the back part in case of a driving storm, and the object in raising the floor is to give immunity from dampness, and yet leave no place for rats or other vermin to hide under the floor, and to make the floor last much longer than it would if resting on the ground.

To make the coop light, we use posts at the corners two inches square, cover it with half-inch lumber, and make the roof of sheet-iron. For ventilation, we cut a small window, say 6 by 12 inches, at each side, and cover it with wire netting on the inside; but have a small slide-door on the outside, to close in cold or stormy weather. At the front we make a door as wide as the coop, excepting a three-inch strip at each side, and this door is a light frame, covered with wire netting so close that the smallest chicken cannot get through it, and hung with hinges so that it can be swung open when we wish to let the hen or brood out. When the coop needs cleaning, we open the door, and with a hoe and broom can soon remove all accumulations.

When the coop is finished, we spike a strip to each side, which projects both front and rear about 18 inches, to be used as handles to move it, and two men can walk right along with one of them. These strips used as handles should be 1 by 3 inches, of light but strong wood, and the corners should be rounded where they project.

A run should be made in front of the coop, the sides being made of movable panels of fence made of fine-

## Relief for Lung Troubles The D.L. EMULSION

In CONSUMPTION and all LUNG DISEASES, SPITTING OF BLOOD, COUGH, LOSS OF APPETITE, DEBILITY, the benefits of this article are most manifest.

By the use of The "D. L." Emulsion, I have got rid of a hacking cough which had troubled me for over a year, and have gained considerably in weight. I liked this Emulsion so well I was glad when the time came around to take it.

A LEVEL FOR TILE DRAINING.

A Low-Priced and Effective Instrument  
for This Specific Purpose.

The level shown in the cut will cost perhaps 35 cents for material and a little more for making, unless you can make it yourself, says a writer in Ohio Farmer. To adjust and graduate it, drive two stakes into the ground solid to receive the ends of the level, and as near level as you can tell by your eye. Put on the level and make a pencil mark at the point of the plumb bob. Reverse the level and mark. If the two marks do not come at the same place, one end is too high.

You can easily tell which end is too high, then drive it down until the bob points to the same place, with the end either way. Then whenever the bob points to this place it is level. Mark

A LEVEL FOR TILE DRAINING.

this place with a fine saw, or, in any way you cannot mistake. Reverse end of your level and put on the level, place one-quarter of an inch. Mark a bob point. Remove the level and put it under the other end, mark the same. You can do this with one-half, three-quarters of an inch pieces. Now the level is graduated and marked ready for use.

To level a short distance, I place level in the middle and sight both along the under side of the level. The difference in height will show the error.

To lay tile by this level, I begin at the lower end, place the first tile where I want it, then place a tile where the other end of the level reaches. If the grade is one-quarter inch to the rod, I raise or lower the tile until the plumb bob points to the first mark back of the center or level mark. Then I place a tile half way between these two, just touching the level. Then lay between these tiles by a straight edge. When you get to the middle tile, move it forward or back to receive full tile. Fill our your rod and repeat. If your fall is one-half inch to the rod, use second mark.

I have laid tiles when I did not have one-quarter inch fall to the rod. Then I had the bob point half way between the center and one-quarter inch mark, making a fall of one-eighth inch per rod.

Be sure your plumb bob works freely and do not allow it to be swayed by the wind. I think I could instruct anyone how to level more correctly by the way mentioned above and with less expense than going six miles for H. Potter, secy. Alf. are: M. S. Miller, E. H.

### HOW TO KEEP APPLES.

Chief Requisite for Preservation is a Uniform Low Temperature.

On the subject of keeping apples Mr. O. W. Hawden of Worcester, Mass., in a recent address, said: "If apples are expected to keep well they must be picked from the trees and handled carefully. Barrels and boxes are found the most convenient packages for apples, but should be washed and thoroughly cleaned and dried before using; care should be taken that no nails protrude through the staves. The fruit should be carefully placed in the barrels and gently shaken and pressed into them as compactly as possible to prevent any motion of the fruit after the barrels are headed; each sort should be marked and placed where the temperature is low and uniform if possible. If apples are to be stored for winter or late keeping the

sooner placed in a cool and uniform place the better. A fruit house or cellar made with a view for the purpose is best, but most growers usually have to resort to their cellars. The chief requisites for the preservation of fruit from October to May or June following are a uniform low temperature, which in autumn may be obtained by giving abundant ventilation on cool nights, to be closed when the atmosphere is warm. Fruits should be maintained or kept in as nearly as possible its condition when gathered. The gradual ripening process, or the fermentation of the juices premonitory to decay, should be checked and kept in a dormant condition. When maintained nearly at freezing point the mellowing or ripening process in the fruit nearly ceases. Fungi and mildew, the primary causes of decay, do not germinate under these circumstances. The best late keeping results are promoted thereby. The prices at which apples are sold differ very materially between October and June and are often as one to five; thus the growing price in the cellar is of fully as much importance as the growing fruit in the orchard."—Ice and Refrigeration.

### Working the Roads.

A good many of our readers will be warned out by the supervisor to work the roads. In some cases it will be going through the form mainly, or playing work the road; in others there will be a good deal of work done. Much of this good work done is spoiled by reason of the incompetence of the supervisors. We have seen roads rendered impassable almost all summer by the lack of a little know-how on the part of the man who was bossing the job. Where dirt is piled into the middle of the road with plow and scraper, it is folly to fail to use the harrow. If the harrow is not used, and used thoroughly, the result will be that the road will be full of holes for months to come. When a thresher wishes a first-class track for his horses he selects ground that has been plowed and thoroughly harrowed. He knows that this will tramp down smooth and hard. Freshly plowed ground or a pile of fresh dirt contains large lumps and many comparatively open spaces, and when travel comes on it without being sufficiently pulverized, it makes the very worst kind of a road. Therefore, before leaving the road, harrow the soil thoroughly and completely and thus prepare a good highway.—Wallace's Farmer.

### FAILURE

A lonely man, all bent and ag'd,  
With wrinkled brow and sunken eye,  
As if some wrecking storm had raved  
And dashed his soul on breakers high.

Sat brooding o'er the fruitless years  
Of life—all selfish, empty, vain—  
Which, like a tale that's told, appears  
To yield nought else but grief and pain.

The story, which his life unfolds,  
Is told by many a one besides;  
And in his failure one benolds  
The goal to which the devil guides.

One false, mistaken, foolish deed—  
A sin you call it, not a crime—  
But still, a sin, which like a seed  
Has grown and spread with growing time.

Twas this, this only, nothing more  
Which marked the lonely man's career;  
It's darkened shade, at every door  
Grim mocked him with its cynic sneer.

This road to wealth or road to fame  
Is blocked behind and blocked before  
By Nemesis, that heartless dame  
Who loves to tear the healing sore.

Thus thought the lonely man one night  
As home he went from fruitless toil  
And dreamt of happy homes and bright,  
Which made him from his own recall.

What boots it that the fault's his own?—  
That he but suffers for his sin—  
While turns and harden into stone  
The hearts, once soft, of kith and kin?

He only knows that now they're hard,  
When, most of all, he longs and yearns  
For help to live the life that's marred  
While vain regret within him burns.

Back through the weary years he looks,  
Seems he all that might have been,  
Reads chances lost, as he would books  
Once strong to stir, now powerless seen.

And, as he looks and reads and scans,  
An impulse fresh ails once again.  
The nerveless arm and, with it, faus  
The dying embers in his brain.

I will not yield, he seems to say,  
To unkind fortune, hostile fate,  
Spread their cruel clouds although they may  
Or, heartless, say, "Tis now too late."

Once more I'll strive to make a name,  
To bring me homage, bring me friends;  
For, be it wealth or be it fame,  
To these alone the world e'er bends.

And in the world's high dancing smile  
He lost himself, forgot his worth,  
And, on a dead affection's pile,  
Great mounds of worldly praise alone.

Thus spoke and dashed the lonely man  
Forth, fiercely and with fixed intent  
To realize the world's good things begun  
While selfishness ambition bent.

And first within the world's great mart  
He strove for fortune, for a shining smile,  
But though he played right with his part  
Fair fortune passed him by the while.

Then tried he physic, then the law,  
But each looked on with cool contempt,  
And while they scorned the world for a law  
But failures of the dreams he dreamt.

Next from the press and pupil came  
Strange, stunning, eager, loud appeals  
Which, neither weak, nor poor nor lame,  
Yet o'er them quick oblivion steals.

And, then the poet's art he tried,  
Poured wildly forth his passionate words  
Loud through the world and long he cried

Cures Summer Complaint. DEAR SIRS,—I have used Dr. Fowler's Extract of Wild Strawberry for twelve years when required, and think it is the best remedy to be had for all kinds of summer complaints. In our family it has never failed to cure any case.

### THE GARDNER'S SONG.

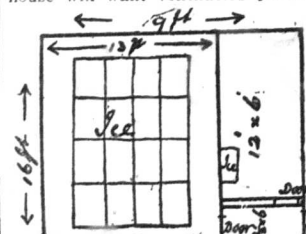

Oh! a gardener's life is as pleasant a life  
As a workingman's can be;  
'Tis a glad pursuit to plant the root,  
And nurse the flower and tree.  
His life is set to ceaseless song,  
Sweeter than poet can sing,  
Warbled in notes from the feathered  
throats  
Of the birds from summer to spring.  
And doth he not make the wildest brake  
Gay as a conqueror's feet?  
For his strong, white hand is the magic  
wand  
That brings fresh flowers to our feet.

With a sneer or a frown a man may look  
down  
Upon many ignoble trades;  
But purple and pride even dare not deride  
The work of the king of spades.  
The oldest craft known he claims as his  
own.  
The only work heaven thought well  
Should be done by a man ere a trouble be-  
gan,  
Or the "grand old gardener" fell.  
Then the men of the spade should be proud  
of their trade,  
Invading no crowded mart,  
Whose daily toil gives wealth to the soil,  
And joy to the home and heart.  
—Gardener's Magazine.

### Keeping Ice.

A correspondent of the Country Gentleman says: "I have a frame building, 19 by 16 inside, 7 feet from floor to beams, and propose dividing it off for an ice house as below." Then he asks: "Could you tell me how much ice I could pack in it, and how much would be required to keep the room (12 by 6, by 7 feet high) cool for six months?"

The outside walls should be hollow and the space between them, six inches to a foot, can be filled with sawdust or cut straw. Both ends of the ice house will want ventilators placed in

## your child

You note the difference in children. Some have nearly every ailment, even with the best of care. Others far more exposed pass through unharmed. Weak children will have continuous colds in winter, poor digestion in summer. They are without power to resist disease, they have no reserve strength. **Scott's Emulsion** of cod-liver oil, with hypophosphites, is cod-liver oil partly digested and adapted to the weaker digestions of children.

SCOTT & BOWNE, Belleville, Ont.

50c. and \$1.00

gives the classifications of soils as light (sandy), heavy (clayey) and humus.

Aside from the withdrawal of plant food by growing crops, the chief loss of fertility in the soil is due to leaching or the removal of elements of plant food by solution in water percolating through the soil. The lighter or more sandy the soil the greater the liability to leach. On the other hand, clayey soils may be so heavy as to be unproductive because of lack of proper drainage.

In well-drained land the decay of vegetable matter underground produces the black, insoluble humus universally recognized as giving fertility to the soil.

In wet, poorly drained land the result of decomposition is a brownish, partly soluble product that because of its acid qualities produces what is termed a sour soil that is unproductive.

### Gather Apples at Maturity.

Careful experiment has proven that apples which have been gathered soon after maturity keep longest. Mr. B.

**WORKING PLAN OF ICE HOUSE.**  
them, to allow the hot air to pass out of the building. If a coat of dryish sawdust is kept over the surface of the ice at all times, it should keep fairly well. In round numbers there would be room for 1000 cubic feet of ice, and it weighs 57,097 lb. per cubic foot. The entire space should be filled, to make certain that the supply would last through the season.

**Thick vs. Thin Wheat Seeding.**  
A series of experiments has been conducted for eleven consecutive years by the Indiana Agricultural Experiment Station relative to the quantity of wheat seed to sow. Seeding took place September 20. Oats stubble was broken and thoroughly prepared and velvet chaff wheat, a medium-sized seed, used. The average yield, as well as the yield and weight per measured bushel in 1895, is shown in the following table:

Seed sown p. a. 11 years.	1895, str'k bu.'95	Bushels av. per acre	Lbs per bu.
Two pecks .. 23	20	59	50
Three " .. 25	19	58	50
Four " .. 27	19	58	50
Five " .. 29	20	59	50
Six " .. 30	19	58	50
Seven " .. 30	19	58	50
Eight " .. 30	19	58	50
Nine " .. 27	16	58	50
Ten " .. 25	16	57	50

In 1891 the highest yield was produced from three pecks, and in 1895 from two pecks. In both the years named the wheat thrived well and did not winter kill. The time of sowing, preparation and fertility of soil and size of the wheat kernels are all factors to be taken into account in deciding upon the quantity of seed per acre. The results obtained at the Indiana station indicate the desirability of sowing at least six pecks per acre as a rule.

**The Farmer's Wife.**  
Too much has been written about the "overworked farmer's wife." Such articles may help to open the eyes of some thoughtless husbands, but they also serve to frighten some city wives, whose husbands would like to live on a farm if only the wife were willing. I remember that, when my husband first told me that he would like to live on a farm, I thought it ground for a divorce, and told him so. All I knew of farm life was what I had read, and all I could seem to remember of that was that the farmer's wife worked from morning until night, day in and day out; that she never could go anywhere; or, if by any possible chance she could, she never had anything fit to wear. Now I know that there are farmers' wives who enjoy themselves, and who have far more of the comforts of life than most city wives. If there are others who have to work too hard, let us not tell or write of it, but, like the skeleton, shut it in the closet that it may not frighten others, for the man who would thoughtlessly overwork his wife in the country would let her starve in the city.—M.T. in Rural New Yorker.

**A Lesson on Soils.**  
All soils may be considered as composed essentially of sand, clay and vegetable matter, and the predominance of these elements respectively

Careful experiment has proven that apples which have been gathered soonest after maturity keep longest. Mr. Libbie chief follows if the skin is broken on the least.—Colman's Rural World.

**Abundant Proof.**  
He—Why do you keep me in an agony of doubt? What proof have I ever given that you really love me?  
"Why, Ambrose! I've broken every one of half a dozen engagements, made since I promised to marry you, is

**The Herdwick Sheep.**  
Twenty-three well-defined and distinct breeds of sheep are recorded as bred and kept on the British Islands. Of these the various classes of Downs and the three leading long woolled breeds have, for many years, been also bred in America, and more recently the Dorsets have been imported and have proved a valuable addition to the sheep stock of the United States. Among the breeds unknown this side of the Atlantic is the Herdwick, the illustration above being of typical animals of that breed. These are peculiarly upland sheep, flourishing only on the hills of Cumberland. For activity and impatience of restraint they are rivaled only by the Rough Mountain "Bighorns." They become strongly attached to their native land is accustomed grounds, and it is when removed to new and strange locations that their independent character shows itself. They are hardy, clean-shaven, kept and admirably well adapted to what is called "rustling"—that is, picking up their own living at all seasons of the year. The legs and faces of Herdwick lambs are black, but at the end of the second year they whiten, mangle, to a silvery gray. The ewes are hardy, less, but the rams have horns. Their bodies are compact, with good quality. The fleece is light and of little value. There are many mountainous and broken regions of the United States and Canada for which this hardy cliff-dwelling race of sheep would seem to be well adapted.—Farm and Home.

**Skim Milk Calves.**  
The Ontario Agricultural College reports the following experiment in feeding calves:  
"Beginning May 6 an experiment was conducted to find the relative value of skim milk and whole milk for calves. Two grade calves as nearly alike in age and weight as we could get were selected. No. 1 fed on skim milk only, was dropped May 3 and weighed only 61 pounds on May 6. At the end of six weeks it weighed 141 pounds, a gain of 80 pounds, or nearly two pounds per day. During this time the calf drank 714 pounds of skim milk. Calf No. 2 fed on whole milk (dropped April 19), weighed 75 pounds at the beginning, and 201 pounds at the end of six weeks, a gain of 126 pounds, or three pounds per day.  
"The calves were both sold to a local butcher, who pronounced the calf fed with whole milk worth 1 cent a pound more than the other. The calf fed on skim milk sold for \$8.50, and the one fed on whole milk for \$7.50. Allowing \$1.50 as the value of No. 1 calf and \$2 as the value of No. 2 at the beginning of the experiment, we have \$2 as the value of 714 pounds of skim milk, or twenty-eight cents per 100 pounds, and \$5.50 as the value of 714 pounds of whole milk, or seventy-seven cents per 100 pounds. To produce one pound of gain required 8.9 pounds of skim milk. The whole milk gave one pound of gain for 5.6 pounds fed."

**Value of Thought.**  
It will sometimes pay the farmer to work less and think more. Many a man has worked hard early and late for a year and found at the end of that period that he could have made more money with less work if he had sat down behind the barn and figured for about a week.—San Francisco Call.

## THE ARAB HORSE

Views of Randolph Huntington, the American Authority on Breeding.

Mr. Randolph Huntington of Oyster Bay, L.I., N.Y., the leading American authority on all matters relating to the Arab horse, says the Country Gentleman, was born in Springfield, Mass., Dec. 8, 1838, of old Connecticut stock, and a direct descendant of one of the signers of the Declaration of Independence. He was educated at a military school at Hamden, Conn., and pursued for many years a mercantile career, but seized every opportunity meanwhile to prosecute studies in animal breeding, this science having been a passion with him almost from earliest childhood. At five or six years of age he was keeping rabbits and guinea-pigs, and a little later canaries, game fowls, pigeons, squirrels, dogs and other animals—always seeking to get the best he could find and then to improve their progeny by careful mating. Finally he settled down upon the horse as furnishing ample scope for all the skill and knowledge he could bring to bear, and for years now, as readers know, he has been diligently engaged in studying, thinking, observing and writing about that animal, and in breeding what he regards as the best specimens of the genus in the world. His views may be briefly summarized as below:

Haphazard breeding, producing mongrels, can never accomplish anything; there must be a yet undiscovered path, at least an unfrequented one, whereby the breeder could be as confident in the prospective produce of his horses as in that of his Guernsey or Jersey cows. Other animals, bred in families, attained their highest excellence; why was the horse an exception? Presumably he was not. But how were the twisted and entangled threads of equine life to be unwound? How from the commingled breeding of decades of years was a pure strain of blood to be picked out? Immediate change to uniformity was impossible. It would take years to produce a single pure type from so heterogeneous a mess. But,

RANDOLPH HUNTINGTON.

Leading American authority on the Arab horse.

nothing daunted, and guided by taste already successfully made in poultry-breeding, he began the work. His selection and championship of Clay blood is too well known to dwell upon. Suffice it to say that the researches he made, together with personal experience and observation, led him to believe that the Arabian horse proper was the sine qua non of perfection in horse-breeding. Henry Clay, a notable horse in himself, was directly traceable to Arabian lineage. Securing the best obtainable of his sons and daughters, selections were made and these were carefully interbred. On the arrival of Gen. Grant's Arabian horses Leopard and Linden Tree, gifts from the Sultan of Turkey, Mr. Huntington was permitted to send a few of his mares to Washington, where they were bred to Leopard. But the acme of his desire was not reached until 1888, when he

was obtaining the pure Arab breeding her to Leopard, a fine foundation of pure blood was also able to secure a son of Naomi by Kismet daughter of Naomi by

Good ventilation should be provided by a door at one end and a window at the other, and for protection from cold in zero weather the window should be arranged for double sash, and a storm door be built outside of the door. This building should be located near the barn, or if there is room, it may be partitioned off in a basement or under a hay bay, but in cold regions where mercury remains for weeks below zero I would prefer the separate building outside, and would build a flue and set up a stove so that a fire could be built once a day in severe weather.

In feeding beets to cattle or hogs we do not cut them at all, as long experience has shown that it is useless. A cow sometimes get choked on a triangular piece of beet that has been cut, but no cow ever choked on a piece that she bit out of a beet herself, and they will eat them without danger or waste if fed whole. I value beets for feeding to the brood sows, and think they are worth more for this purpose than for any other. If you want early pigs, move your sows into the empty bins from which the beets have been fed out, putting them there ten days before farrowing, and you can save all the pigs in the worst weather, and by the time the pigs are ten days old they can be moved to the hog house.—Waldo F. Brown in Ohio Farmer.

## HUNGARIAN SWINE.

A Breed in Which "the Whole Hog Goes Into the Sausage Tub."

Hungary in its climate and soil greatly resembles our Middle States.

TYPICAL MAN GALICZA HOG.

The greater part of its 14,000,000 of inhabitants are engaged in agriculture, growing especially wheat and corn, and raising all kinds of farm animals, among which the horse and the hog occupy first place. The stock of the present Hungarian swine was originally brought from the Mongolian desert, when Attila with his hordes left that overpopulated land. Undoubtedly this stock originated from the wild hog, which, during the long warring peregrinations of its owners, was subjected to the most remarkable changes of form, without losing its principal good qualities, hardiness in keeping and fine fattening properties. Among the four principal breeds raised in Hungary none excel the Man galicza. The extensive oak and beech forests on the mountain slopes of Hungary furnish unequaled swine pasture, and have largely aided, in giving the Man galicza swine a leading position in the live stock markets of north and middle Europe. Many thousands of their hogs are each week disposed of in Berlin and Hamburg, because, as a Berlin butcher told the writer, "the whole hog goes in the sausage tub." The head of the Man galicza is short and broad, nose cylindrical, depressed at the back; face and cheeks are fleshy, thinly covered with hair; jaws broad and fleshy; ears large, somewhat rounded and drooping; neck mostly short, fleshy and full arched; the withers are wide and do not rise above the back; back straight, long and broad; loins full and deep; brisket deep and wide; ribs well sprung; belly wide and straight, nearly touching the ground in well fattened animals; hams large and full; lower part of legs fine-lined but strong; skin soft, thin and pliable, of a yellowish or black color. During winter the skin is thickly covered with curled hair; at the neck, withers and along the back the hair is somewhat coarse, but not long. During the summer the hair growth is thin, some animals being nearly bald. A full-grown Man galicza hog stands at least three feet high and measures from tip of the snout to the root of the tail about four feet. Ordinarily fed animals at

The waves in thunderous menace break Upon the rocks below my tower, And none will dare the Sea King's power, And venture shipwreck for my sake.

Yet once—my lamp a path of light Across the darkling sea had cast— I saw a sail—at last—at last— It glided toward me, through the night.

My lamp had been the beacon set To lead the ship through mist and foam, The ship that came to take me home To that far land I half forgot.

But since my tower is built so high, And such sharp rocks are hid below, I quenched my lamp, and, weeping low, I saw my ship go safely by.

—Pall Mall Gazette.

## A FEMALE CREW.

"Now, which one?" asked Polly, and she stood on tiptoe that she might determine the point.

She was a plump Polly. She was a short Polly, and the mantlepiece was a high one, so that there was no other thing to do than to stand on tiptoe while she gazed at two faces and wondered: "Which one?"

They were not female faces, but Polly, though young, was old enough to take a very positive interest in masculine faces. She had already decided which one she would like to marry, and would she have been surprised if some day, out of that surface of paper on the mantelpiece had broken a voice "Polly, my dear, as I love you, will you marry me?"

But he had maintained a grave silence because only a picture, for which reason nobody could claim credit for unusual discretion of speech for a man. Yes, dumb, dumb, and that gave Polly's warm affection a chill. Then he was her "first cousin Joe," and a kind of brother, was he not? That gave her marrying fever a still colder chill. This young man was very handsome. His eyes were as expressive as Polly's and that is saying a good deal. Her eyes were black, soft and loving. Anyone that had eyes as handsome as Polly Ricker's owned an excellent piece of property. His features were very regular. The lines of his mouth showed firmness, yet tenderness, and Polly, first looking round to see if Aunt Nabby were "peekin'," had kissed the picture the very day of our story. Aunt Nabby was not given, though, to "peekin'." That very moment she was frying doughnuts because Polly liked them. The other picture on the mantelpiece was that of an honest, reliable soul; but Polly had no affection for him. She was a visitor under the roof, and in the two weeks that her visit had stretched across, she had learned very much about the history of beings whose only presence was that of pictures. Had not Aunt Nabby said that this plain, sensible face belonged to a sailor, a young captain?

"Oh, the other is a seaman only; but I had rather marry a handsome sailor than a homely, stiff captain," was Polly's opinion.

She sighed. She was thinking that the handsome sailor was only Cousin Joe. She hesitated a moment, kissed the photograph again, and then went downstairs to look out of a window fronting the sea and to pity sailors.

Everybody in the neighborhood had something to do with the sea, which was only a bit of a way off, and kept pounding night and day on the rocks, making all the fuss it could to attract as much attention as possible. To keep this unruly sea in any kind of subjection everyone must do something. Uncle Ronald Ricker was the keeper of the yellow life-saving station on the rim of the gray sands.

Uncle Ronald was a big, burly, good-natured kind of a fellow. Aunt Nabby was a slim, slender woman, whose thoughts were quick moving, darting out like swallows' wings, and her eye sparkled like a run of brook water the day the spring has lifted the lid of ice covering it.

Said Uncle Ronald to Aunt Nabby, in the hearing of Polly at the window: "I'd like to have you, Nabby, clean up at the station, if you will; sweep round and so on. Nothin' doin' there in summer, but I want to keep things sort of slicked up, and I'll low you the pay for it. I've got to be off to my later-patch t'other side of the back

## Mothers

Anxiously watch declining health of their daughters. So many are cut off by consumption in early years that there is real cause for anxiety. In the early stages, when not beyond the reach of medicine, Hood's Sarsaparilla will restore the quality and quantity of the blood and thus give good health. Read the following letter:

"It is but just to write about my daughter Cora, aged 19. She was completely run down, declining, had that tired feeling, and friends said she would not live over three months. She had a bad

## Cough

and nothing seemed to do her any good. I happened to read about Hood's Sarsaparilla and had her give it a trial. From the very first dose she began to get better. After taking a few bottles she was completely cured and her health has been the best ever since." Mrs. ADDIE PECK, 12 Railroad Place, Amsterdam, N. Y.

"I will say that my mother has not stated my case in as strong words as I would have done. Hood's Sarsaparilla has truly cured me and I am now well." CORA PECK, Amsterdam, N. Y.

Be sure to get Hood's, because

## Hood's Sarsaparilla

Is the One True Blood Purifier. All druggists. \$1. Prepared only by C. I. Hood & Co., Lowell, Mass.

Hood's Pills are purely vegetable, reliable and beneficial. 25c.

off there on the water and needed some signaling from the shore!"

If she had followed the promptings of her heart and the signal vocabulary permitted, she would have at once signaled: "I love thee, Joseph." But he was just Cousin Joe, and repressing any demonstration of special interest, she lifted the scuttle in the roof, threw it back, climbed upon the platform and looked off.

Heart started up and began to beat like a thrasher's flail for there was a schooner flying a signal. She knew what it meant. Was it Cousin Joe off there? Whoever it was, a signal of "distress" was fluttering above the vessel. Should Polly run and get Uncle Ronald? When in summer during the season of closed doors and vacant roofs at the station, any disaster might happen on the water, the proper procedure was to run for the keeper and notify him. At the head of as many of the old crew as he could gather from the cornfields and fish houses, the keeper hurried to the station, operating as might be advisable. Uncle Ronald, though, was off on a "later-patch," a mile away. In the meantime the whole United States navy, ducking their heads one after the other, could sink off this very station.

"Wasn't a female crew running this station to-day?" soliloquized Polly. "I'll answer that signal myself."

The schooner was so near the shore that if her sails had been set the appropriate signal would have been the J.D. of the International Code of signals: "You are standing in to danger," but this vessel had dropped her canvas, as if meaning to halt anyway, and then she had a suspicious look, as if sinking.

"I'll let them know they are recognized, and that they may expect help," thought Polly, working swiftly.

Turning away from the staff, at whose head now fluttered this signal like a tongue of cheering speech, Polly ran down the short stairway into the crew's night quarters, then down the stairs, dropping to the kitchen, and

cried, in jerks: "Oh—oh!—zounds!—auntie—quick! Left Dancer!"

"What?" "Quick!" She was now darting through outer door.

"Git your uncle, Polly!"

Field Beets for Stock.  
Beets should be harvested before hard freezing, but a moderate frost will not injure them. No digging or plowing is necessary, as they have a good hold on the soil and can be easily pulled. The leaves can be easily removed with the hand, and it is advisable when they are gathered early in October, to leave them in the field for two weeks or more to partly cure before putting them away for winter. If done they should be piled in three or four feet high, and covered with corn fodder bound in bundles over them so as to keep them dry. When put away for winter, it is well to put in bins above the floor raised six inches, so as to make a circulation of air through them. No matter of four inches should be left between each two bins. A house inside measure, will give six feet of passage way between them. The beets stored six feet deep will store more than 800 bushels. To make a frost-proof, the walls upon the stable and a foot wide, with to the packed with dry sawdust is struck it rat-proof it should have four plies, and be protected with the London Iron on the outside at the bottom and top; for if the rats cannot get in at the ground or at the eaves, they certainly cannot cling to a per-

# CONCLUSIVE PROOF.

From a Well Known Citizen.

"My daughter Polly, has for more than a year been troubled with severe symptoms of kidney disease. She had constant and acute passing of her back. The pain in her head was fearful and almost unendurable. It frequently prevented her from attending school, and she found study at home practically impossible. She had no appetite, and did not sleep well. The pain was very severe around her heart and she was much troubled with fluttering and palpitation. She was completely worn out in body and was tired and drowsy all the time. Her mother and myself became seriously alarmed as she was constantly getting worse.  
"Last July my daughter Sarah, a teacher in the Public School at Kingsville, Ont., came home to spend her vacation, and finding her sister in such a distressing and dangerous condition, said, 'I am taking Doan's Kidney Pills and they are doing me much good, I have a box with me and will divide with Polly, which she did. By the time Polly had finished the half box her improvement in her condition was so marked, that I procured more from Mr. Fraleigh's drugstore.  
"Her full restoration to health and spirits was rapid and continuous. She has now none of the former dangerous pains and distressing kidney troubles. She eats and sleeps well, and for more than a month has enjoyed the most vigorous health. She has not lost a day at school since she commenced taking the pills, and has so much faith in the cure that she restored her to full health that she wants me to keep six boxes in the house all the time, in case they should be needed and not available. Her cure has been so wonderful she thinks they will cure any complaint. If the pills had cost \$10.00 a box, I would not have begrudged the money. The restoration of my daughter to full health and strong girlhood, from her former serious sickness, etc., has made her mother, myself and daughter very happy families.  
"I make this sworn statement with the full approbation of my wife and daughter, voluntarily and without any trying or inducement whatever, to show the people the genuine value of the pills, and myself feel for the wonderful cure wrought by the Doan Kidney Pills. We have not the least doubt that her trying the pills herself and the cure she received, is the best doctor's bill, as she was all but sick abed at the time. I am sixty-two years of age, a carpenter by trade, have been a resident of St. Mary's for forty years, and have been a citizen for thirty years and am well known, and I make this solemn declaration believing the same to be true, and knowing the same to have the same effect as an oath, and according to the Act respecting extra Judicial Oaths 1902.  
WILLIAM BROWN.  
Taken and declared before the Power of St. Mary's, the County of Perth, this 5th day of March, A. D. 1906.  
W. M. N. FORD,  
A Commissioner of the Court of Justice, Ontario.

the snout to the root of the tail about four feet. Ordinarily fed animals at the age of one year weigh from 150 to 160 pounds; but when well fattened the weight of a full-grown hog increases to from 500 to 600 pounds. They are not very prolific breeders, producing seldom more than from seven to eight pigs in a litter, but they are very careful in treating their young, and therefore the loss of pigs is but inconsiderable. The hardness of this breed enables it to thrive even under unfavorable conditions, and to winter in the open air without suffering. If taken to the pen, after pasturing in fields and forests is over, and fed with corn and other grain, it produces a first-rate lard, which is not surpassed in flavor and keeping quality by that made from any other breed.—American Agriculturist.

A Sweepstakes Stallion.  
We re-engage from the London Agricultural Gazette the accompanying portrait of Hedon Squire 4363, winner of the sweepstakes cup as best stallion at the London Hackney Show of the

A PRIZE WINNING HACKNEY.

present year. He is a son of Rufus 1343, dam 494 Polly by Triffid's Fire-away 219; and was shown by Sir Walter Gilbey. Commenting on the award the Live Stock Journal said:  
"Sir Walter Gilbey's horse has improved of late almost out of recognition. His head having lined down to the beautiful ideal of what a Hackney's napper should be like. His back and quarters are simply perfect, and his legs, supported on the best of feet, are like bars of steel. This stallion is also a superb mover, and at the walk there was probably no horse in the show that could surpass him. His victory, therefore, was particularly well received."

Ways and Means.

"How?" demanded the advocate of equal suffrage, impassionedly, "are women to be induced to step and reflect?"

"Put up mirrors!"  
They reached the man who had spoken, but from him they did not know they ought of him except that he must be a supporter of the ancient regime and an observer of human nature.—Detroit Tribune.

Cervical Effect.

"Pester movement," repeated the cow. "Well, I guess yes. Feel it? Say! Why, formerly nothing but solid red would tease me, and now I can't even see crushed strawberry without getting hot under the collar."

Whence it was made to appear that art was not satisfied merely to mirror nature.—Detroit Tribune.

Instantly Decided.

"And now," said the lawyer to the actress, "having secured your divorce, it may be proper for me to allude to the fee for my services."

"You had better see my manager about that."

"Your manager?"

"Yes. He pays all my advertising expenses."—Washington Star.

Suit for Pigs.

A writer in Wallace's Farmer makes the following very sensible remark about the necessity of providing plenty of sunlight for young pigs:

Many a fine litter of pigs is injured seriously the first week by a lack of sunlight. A young pig is much like a flower in this respect; it must have sunlight or be dwarfed in size, impaired in health and spoiled for future usefulness. Where farmers have a hog house in which a number of brood sows are having their litters, we advise putting in cheap sash on the south side, which can be done very easily and at present prices at a very small cost. A brood sow should never be allowed to produce a litter in a dark place.

the pay for it. I've got to be off to my later-patch t'other side of the back pasture."

"I will, Ronald."

Ronald Ricker left the room.

"Polly, soon as I've finished these ere doughnuts—then—come on!" cried Aunt Nabby. "We will run that life-savin' station this forenoon. They shall have a female crew to-day. You get the brooms ready. It is a worn-out thing down at the station. We'll be lively and start soon."

A small but sprightly broom-brigade soon charged upon the station and captured it without difficulty. Windows were thrown up, the brooms set to whisking and the dust routed.

The living room below, the men's headquarters by day, speedily was swept. The boat room, with its apparatus of surfboat and breeches-buoy, life car and Lyle gun, rockets and signals, received prompt attention, and this floor also was thoroughly swept. Aunt Nabby remained to do some "cleaning out," behind the door where one of the other but less particular crew had left a heap of dirt. Polly, singing away, went upstairs, hopping like a robin from step to step, landing on the threshold of the masculine crew's quarters by night.

"The beds look all right," said Polly, eyeing six iron beds, neatly covered with bedding and set in two prim rows along the northern and southern walls of the room. "Yes, they look all right, but I know those men didn't sweep under the beds. N-o, before I sweep, I'll take a look-off from the look-out on the roof."

This was a platform on the roof, rolled about and supporting a flagstaff. Here on clear days a watch was kept by the surfmen. If need be, a signal could be run up to the top of the staff and any needy craft on the water promptly instructed.

"Guess women's eyes can see as quick as men's," murmured Polly, "and we will have it so to-day."

On her way up a short flight of steps to the look-out she halted in a little recess and examined the box of signals kept there. Since her arrival she had been very much interested in the signal department, and, instructed by Uncle Ronald, felt that she could now handle those signals as readily as the keeper himself.

"Don't I wish that Cousin Joe, whom I never saw, only in his picture, were

She was now darting through the outer door.  
"G'it your uncle, Polly!" JME.  
"Too—too—far off! Come!" Nelly.  
And Nabby sprang after them. "Let's take—uncle's—boat—near-by seaport is expressed that might sell the pro- the money  
"We go off?"  
"Yes—yes! You can row right off to its 'Good for ye!' cried Aunt Nabby to the money  
"I am with ye!"  
They rushed uncle's boat down to the relief-firm, shelling sands. They pulled public through the low-running surf and soon the  
"Quick—quick!" said a sailor, bringing a box to the vessel's rail. "We ran on the rock in the night, lost our boat, though, we got off the rock, started a leak, and have been settin' ever since. There, I'll go back with ye. Then I'll pull off and get another load. Cap'n is in the cabin gettin' things up. You are good to come off—women, too. Ready? Hum—now? All together. Pull!"

The boat was rowed ashore, the box, precious with papers and money, carried up the sands, and then the sailor said:

"Lemme go back alone. It will make more room for the next load, with cap'n or anyone that comes."

"I won't marry that captain, running on a rock," thought Polly. "He must be stupid and homely. Give me a handsome sailor."

She thought of Cousin Joe and the homely captain perched in state on the mantelpiece at the house.

As if looking behind and discovering her thoughts, the sailor remarked:

"It won't no fault of our cap'n that we were on that rock, or narybody's. Things will happen, you know."

"I wouldn't marry him anyway," silently resolved Polly.

As the boat was rustling through the surf, Aunt Nabby said:

"Now, Polly, we are the crew to-day you know, and must do just as the crew does to the shipwrecked. I'll start a fire in the kitchen stove in the station. I saw some coffee and sugar down there in the pantry, and I'll fix some milk and cake and biscuit. We'll fix 'em. You watch by the stuff, as it comes. Rest of the crew is agoin' to the station."

Land after land was safely brought from the schooner, which all this time was sitting. With the last boat land came the captain. Polly started when she saw him step on the sands. Why, hadn't she seen it while he was in the boat nearing the land? If Cousin Joe's picture had left the mantelpiece and, turning up, had stepped out of the boat, she could not have been more surprised. This was Cousin Joe himself. She sprang forward.

"Why, Cousin Joe, is it you?" she cried, this short surferman flying up to him, reaching as high as she could and throwing her arms about him.

"I—I—I—" stammered the young man blushing, though not displeased. "I—I—thank you with my whole heart for helping us so nobly, but I am not your Cousin Joe," sorry to say.

Not Polly's Cousin Joe?

"Why, why," she murmured, in confusion, starting back.

Another voice, though, was speaking—somebody from the station—and laughing heartily. "D-R-K Warner, I do declare—ha, ha! Glad to see ye hum! Polly, Polly, dear, come here! This is Dick Warner."

"I thought it was Cousin Joe—that picture on the mantelpiece," said Polly blushing and hanging low her head.

"No, no," screamed Aunt Nabby. "You made a mistake. Cousin Joe is t'other picture—ha, ha! He'll be hum soon!"

Yes, the real Cousin Joe came home soon, and just in time to hear of the engagement between a certain young female surferman and Capt. Richard Warner.—N. Y. Ledger.

A Great Hunter.

The late Duke of Saxe-Coburg-Gotha was noted as one of the keenest sportsmen of the century, as well as an enthusiastic patron of everything connected with natural history. In the fifty-six years of his hunting life he killed 3,800 red deer and about 2000 chamois. But his ancestor, the Elector John George I. of Saxony, shot 12,229 red deer in forty-five years. The late Duke's keepers were the most efficient of their class in Germany, the reason being that they were ex-poachers, to whom the Duke had offered the alternative of jail or an honest life.

**Tea For Embalming.**

Lovers of tea will hardly appreciate the grewsome reminder that tea leaves are used in China for preserving corpses. Well-to-do ecclesiastics often embalm the mortal remains of a specially loved in a chest of tea which preserves the body for many years. A great many persons are giving up tea as well as coffee and are using a substitute called Cereal. It is made from selected grains and is considered very healthy. Grocers are finding a large sale for it. Grocers sell it.

**A Pertinent Question.**

THE NANANEE EXPRESS tells of citizens of that town losing their grapes just as they were ready to pick, by reason of "some spirits, or boys moved by spirits," (evil ones) having visited the orchards the night previous to the time of picking them. This complaint is not confined to Nananee, but applies equally as well here and other places. To such an extent is this thieving carried on that it is almost useless to attempt to raise any of the choicest fruits, and we hear of persons who have choice vines and other trees cutting them down, because of this thieving propensity of the boys, on account of which they are unable to garner any of the fruit. It is enough to make one ask the question, "Is the world growing better?"—Sterling News Argus.

**Canada a Winner.**

Canada has many things that excite the curiosity and admiration of the outside world. Amongst these it is doubtful if any Canadian institution commands more general interest than the Family Herald and Weekly Star, of Montreal. You may travel anywhere throughout Ontario, Nova Scotia, New Brunswick, Quebec, Manitoba, British Columbia and Newfoundland and there you are sure to see the Family Herald and Weekly Star, a paper that is looked forward to each week with intense longing by its subscribers. Outside of Canada, too the Family Herald and Weekly Star has a very large circulation, one of the highest tributes that could be paid to its excellence, for it goes right in and competes with to sign papers and beats them on their own ground. It's simply wonderful.

**Prof. Dorenwend.**

LADIES and GENTLEMEN who require Hair Goods should not forget that PROF. DORENWEIND, the great Hair Goods artist, will be in NANANEE, at PAISLEY HOUSE, on WEDNESDAY, OCT. 7th, with new samples of the very latest and most becoming styles in WIGS, TOUPEES, BANGS, wavy and curly FRONTS and SWITCHES in every length and shade. His skill is well known as is practically demonstrated by the thousands who wear his goods. As this is to be his last trip this fall, these in need of his art should call on him. This summer he has visited all the large and leading American cities, where he picked up suggestions to assist his ideas of new styles which he shows on this visit. His stay is limited so be there on time.

**Call at Lawson's.**

Meat market for prime western beef bought at Toronto market last week, also choice spring Lamb, Mutton, Veal and Pork. Beefsteak 3 lbs. for 25c. 3 lbs. of Pork Chop 25c. Stewing Beef 4c. Roast from 6c. up.

**Song Sermon.**

A Song Sermon will be given in the Western Church on Sunday evening next by the pastor, Rev. D. O. Crossley. All new music, and specially attractive, will be given by quartets and choir.

**Fire!**

On Tuesday morning early the alarm was rung for a fire at Michael Davern's, on Graham street. The barn was consumed and most of the contents, a buggy being saved. The barn was valued at \$800. There was an insurance of \$400. The fire brigade did good work at this fire by saving surrounding property.

**Business Change.**

E. A. Birkley has purchased the confectionery business of W. Davis, and in future will carry on the bakery and confectionery business, and will remove from his present residence into the apartments over the shop. Mr. Birkley has given the people of Nananee good bread for nearly two years, and it is fair to infer that his confectionery will be of a superior kind.

**Guy Bros.**

This celebrated troupe appeared in Nananee at the opera house on Wednesday evening and were well received by an overflowing house. The Guy Bros. have been here for years, and have always given satisfaction. The Guy Bros. have built up a good reputation by living up to what is promised.

**Nearly a Bad Accident.**

On Friday afternoon last Mr. Edward Morrow, of Sandhurst, was driving a spirited team of horses, and when near the railway station the animals became frightened and bolted, running into the corner of Mr. Chas. Stevens' sh house, which brought them to a full stop. The tongue of the wagon was broken.

**Davis & Ford.**

Overcoatings, Scotch and English and Canadian suitings, English and Canadian overcoats, West of England pantings, all of which will be made up on the shortest possible notice. Satisfaction guaranteed. The best of trimming used in making up ordered work. We are not selling at cost but our prices give but small profit and they are lower than our competitors. Please call and inspect before purchasing. DAVIS & FORD.

**Guild of S. Mary Magdalene.**

A special meeting was held in the G. M. room on Wednesday evening for the purpose of closing up the business connected with the late dinner and entertainment. Though the expenses were unusually large, and unavoidably so, the proceeds provided great help to the funds of the Guild. A cordial vote of thanks was placed upon minutes, to the editors of the local show House, advertising, and also to others who gave valuable help on the occasion. It was resolved that the annual Christmas sale should be held on Wednesday, Thursday, December 9th and 10th.

**Obituary**

We regret to chronicle the death of Mrs. W. G. Cowan, who died at her father's residence, Clarksville road, on Tuesday at 6 a.m., after a lingering illness of six months, being a victim of that dread disease quick consumption, at the early age of 21 years. Deceased was the only daughter of Mr. Geo. W. Shibley, and wife of W. G. Cowan, G. T. R. telegraph operator at the station. She was a devoted member of the E. M. church, and although her life was short her work was well done. The departed was a niece of Mrs. H. Finkle, Centre street. The funeral took place on Thursday afternoon at 2 o'clock, and was largely attended, showing the high esteem in which she was held.

**Collegiate Institute.**

The fact that Queen Victoria has now had the longest and most prosperous reign in British history has suggested the celebration of that truth by an entertainment in our Collegiate Institute. A number of ex pupils of the school—all either graduates or undergraduates of our universities, have agreed to disquiet the Assembly Hall on this Friday evening, Oct. 2nd, the various phases of progress made by B. H. that period. Music will be inter-

**Peck's Kidney Pills** Constipation and Liver KILLER. It brings speedily a cure like magic, Sick Headaches, Biliousness, Indigestion, etc. 10 cents a vial.

**AIN-KIL** Sold by A. W. GRANGE & Bro. It gets the prizes won at the Regatta. The regatta committee has the matter in charge should attend to it as soon as possible. Beleville surely will want to maintain her previous good reputation.—Gazette.

Owing to the refusal of the banks to accept American silver except at a discount of twenty per cent., it was announced in the First Methodist church, Owen Sound, on Sunday night that contributions in American coin would be subject to the twenty per cent. discount.

Recently Mr. R. O. Roblin, Green Point, sold by public auction his entire stock and farm implements, along with some house hold furniture, he rented his farm to J. J. Fraick, of Napanee, and left per steamer North King for Uncle Sam's domains, where he expects to make his future home.

John Poole, of Kingston, aged 75, had a vivid dream, which ended disastrously, imagining a bull was chasing him, he leaped from the bed in terror, struck a bureau, broke his collar bone, and cut his face terribly. It is not stated definitely, but it is surmised that he had a late supper of lobster salad.

The Tilsonburgh Observer gives an account of an infant son of Mr. and Mrs. John Ball, of Houghton Township, who was born about fourteen months ago with three eyes, the extra one being situated in the spine at the waist line. It is provided with an eyelid and eyebrow exactly like the two in it's head. The eye was bandaged to prevent injury, and it was sensitive as ordinary eyes. Recently the child fell and burst the eye, which then came out.

About two miles east of Picton, on the high banks of the Bay of Quinte, stands a quaint, substantial old square building, the oldest Methodist church in actual use in Ontario, if not in Canada. Nearly four thousand Methodist churches now stand in use in this country, but none of them have a history dating as far back as the old Congregational chapel, and yet it was built within the lifetime and memory of some now residing in that locality.

When Baby was sick, we gave her Castoria.  
When she was a Child, she took it for Constipation.  
When she became Miss, she still took it for Coughs, Colic, Worms, etc.  
When she had Children, we gave her Castoria.

**Matrimonial.**  
On Wednesday evening at St. John's church, Bath, our esteemed townsman, Thos. J. Naylor and Miss Sarah Coates, daughter of John Coates, of Napanee, were united in marriage. The ceremony was performed by the Rev. Rural Dean Baker. The bride was attended by her sister, Miss Jane Coates, and Arthur J. Callahan, of Kingston, supported the groom. Mr. and Mrs. Naylor left on a trip to several American cities. They will return in about a fortnight and will reside in town. We welcome "Fern" among the noble army of benedicta and join with his many friends in wishing Mr. and Mrs. Naylor a long, prosperous and happy life.—Deseronto Tribune

**Death of John Walsh**  
At the ripe old age of 92 years John Walsh, one of the oldest residents of Napanee, passed quietly away at the residence of his son-in-law, Thomas Trimble. Dr. ceased to breathe in Napanee when the town was but a forest. He was an industrious, kindly hearted man and much esteemed and respected. The funeral took place on Sunday afternoon from the R. C. Church to the R. C. cemetery and was largely attended. J. F. Walsh a son of the deceased, is now on his way from Capetown enroute for Napanee and is expected to arrive here about the middle of this month. Mr. Walsh was a man of the strictest integrity, and an ardent Reformer. He was a friend of Sir Richard Cartwright and of Jno. Solomon Cartwright, who at one time represented this district.

**Letter to the Editor.**  
Mr. Editor there is quite a work going on in the cemetery (commonly called the Hoffman graveyard, west of Piety Hill) under the supervision of Mr. J. R. Fraser, a man well qualified for the work. Roads, avenues and walks have been made, graves and plots have been repaired, low brush cut out, trees limbed up, and the vault nicely repaired, and is now one of the best in this part of the country. Mr. Fraser and a gang of men have done a work for which the many who have friends interred in that cemetery will be thankful, and well they may, for it is just what should have been done years ago. You have only to go and look at the place and see what has been done, to be convinced that much more should be done. Mr. Fraser having been appointed superintendent of the cemetery is prepared to receive anything from anyone who may feel disposed to aid in repairing and beautifying the place, where our loved ones sleep. Now dear friends let us make this spot of earth worthy of those who are sleeping there. All persons wanting lots can have them by applying to Mr. J. R. Fraser, and he will also, if you place the means in his hands see that your plots and graves are fixed up and beautified.  
PRO MEMORIA

Hear Miss Collins sing the latest Metropolitan hit—Dickey Darling.

**Matrimonial.**  
A very quiet wedding was solemnized in Hamilton, Ont., on Wednesday evening, September 30th, when Miss Agnes Deshane, daughter of Joseph Deshane, of Marlbank, was united in the holy bonds of matrimony to Mr. Chas. Donbraugh, a highly respected young gentleman of Hamilton. The ceremony was performed at the residence of the groom's brother, 134 John street, N. Hamilton, only a few intimate friends being present. Miss Donbraugh, sister of the groom, acted as bridesmaid, and Mr. Jackson, of Hamilton, did the duties of best man. The wedding presents were numerous and costly, showing the high esteem in which the young couple were held by all their friends. The Express joins with their many friends in wishing the happy couple a long and prosperous wedded life.

**A Great Game.**  
That fields lady Dame Fortune did not smile on the efforts of the Printers' base ball team on Monday afternoon last, but despite the bad behaviour of the aforesaid Dame the typos managed to pull the "fat out of the fire" fairly well, as at the end of the eighth innings, when the game was called on account of darkness, the score stood even, 27 to 27. The Printers' outbatted, outfielded and outplayed the Cricketers in every respect, but a run of hard luck in the second innings, when the Cricketers piled up 15 runs, made it a very uphill battle for the remainder of the match. The game was called at 2:30 p. m. The Printers went to bat first and drove out five runs off pitcher Lockridge's delivery before the side was retired. Armstrong, for the Printers, held the Cricketers down to four runs in the first and everything was going lovely. In the second innings the Printers secured four runs. The Cricketers then went to bat and the run getting was fearful to behold. There was only four hits made in this innings, all one batters got, but nevertheless 15 runs were netted. Overthrows and hard luck were accountable for this phenomenal run of runs, although one uncharitable fellow said the Printers allowed the Cricketers to secure this lead to make the match more even. At the end of the second innings the score stood 19 to 9 in favor of the Cricketers. After the second innings the latter were thankful if they succeeded in getting one man in before the side was retired, and their backers, who, after the second innings were confident that they had a sure thing, began to feel somewhat uneasy. McCulloch, of Newburgh, was placed behind the bat for the Cricketers and Lockridge retired from the box in favor of Trimble. The Printers had now struck their feet and had on a batting streak. After several innings Trimble, who was being batted heavily, made way for Harrison, and he in turn was batted for by the heavy hitting typos, and after pitching about half of the eighth innings was replaced by McCulloch. It was not ascertained whether they had any more available pitchers as the game was called too soon to find out. In the eighth the Cricketers succeeded in getting four runs with no men out. McDonald met with an injury to his finger in the third innings while batting, and was replaced by Coates. Livesley, on first base, put up a star game for the Printers. Root, who took up his station behind the bat in the third innings, replacing Rooney, played a fine game, and McCulloch also put up a good sample of ball. Ed. Grange and "Joe" McAllister, who figured in a game of ball for the first time in several years, played their positions well. Lockridge played a nice game and the old reliable Sandy Armstrong was much in evidence, pitching the whole game without getting knocked out of the box. Rev. W. W. Peck held down third base to the Queen's taste. Nice double plays were made by Livesley and Ashley. "Phil" Vanalstine made a good umpire and there was not much cavilling over his decisions. A large and very enthusiastic crowd, among whom was a sprinkling of the fair sex, followed the game with interest. The following is the score:

**No! as Good as She Might be**  
A sensation of more than ordinary interest was enacted in the west when Wal town one evening this week. A man and a girl, that a young man of that locality was greatly infatuated with another man, resident there. The husband was very industrious man, became suspicious that his better half was not as true to him as she might be, and in consequence he watched the movements of the pair. Result—He confronted them with a revolver. It is said entreaties, &c. were made and promises given on the part of both to do better in future if the enraged husband would but spare their lives.—Deseronto Tribune.

**Two Men Drowned.**  
Belleville Sept. 30.—A severe storm broke over this city, commencing with a heavy fall of rain on Wednesday. Mr. Thomas Irwin, a Grand Trunk employee, and his son William left in their boat at daybreak to go to their fishing grounds down the bay. Near Northport their boat was overturned and both men were drowned. The storm caused considerable havoc in the city. Large limbs were torn from the trees and strewn along the streets, while in some cases the trees themselves were laid low. The electric light wires were badly damaged, and the telephone service was considerably impaired. The C. P. R. Co. had direct connection with Montreal was suspended, and its connection with Winnipeg and the coast was interfered with. One of the horses driven by Nicholas M. to the quarryman from Point Anne, to the love of live wire and was killed. To-day from P. R. found it impossible to obtain communication with Toronto. The storm was the worst which ever visited this city. Globe. A.D.,

Myra Collins as Little Miss The has no equal. A new play acted first time upon any stage Sept. 5. Written for her by Mr. Jos. H. G. member of Miss Collins' Co.

The people of Gananoque welcomed That Little Girl, Myra Collins, and her company to crowded houses last week.

Gold Belts worth from \$1 upwards for 60s and 60s at Chinneck's Jewelry Store, as not to carry them over until next year.

Insist on having just what you call for when you go to buy Hood's Sarsaparilla, and a True Blood Purifier and nerve tonic.

has been in abatement at this end of the line up as usual, and his annual never failing signs are brought

well, Deseronto, while crossing a boat on the 18th inst. had an accident but for timely assistance would have been drowned.

How, how do you pronounce it? "Why, CASTORIA of course could it be?" "Well, pronounce it HARMLESS."

are just lovely," is heard from all s and gentlemen who have had the of inspecting our lamps. They get from the factory, the prices are right, at Boyle & Son's.

C. L. Shaanon is selling 22 lbs extra standard granulated sugar \$1.00. 27 lbs. light brown sugar \$1.00, a grade of salt finer and better than the Windsor, \$1.15 per barrel. Tea for 25c that can't be beaten. Strong baker's flour \$1.90 per hundred pounds.

"The Charge of the Light Brigade" is one of the difficult recitations that but few can successfully give, but Belle Rose Emalie, of Edinburgh, Scotland, proved herself equal to its delivery, while she fairly convulsed the audience with her humorous selections.—Toronto Empire.

Feed the Nerves. Upon pure, rich blood and you need not fear nervous prostration. Nerves are weak when they are improperly and insufficiently nourished. Pure blood is their proper food, and pure blood comes by taking Hood's Sarsaparilla, which is thus the greatest and best nerve tonic. It also builds up the whole system.

The oil of the Norwegian Cod Liver is nature's grand restorative, and is only found in its entirety and purity in Miller's Emulsion, "the kind that cures" colds, coughs, bronchitis and all affections of the throat and lungs. Every bottle warranted. No oily taste like others. In big bottles, 50c. and \$1.00, at druggists.

Heart Disease Relieved in 30 Minutes.—Dr. Agnew's Cure for the Heart gives perfect relief in all cases of Organic or Sympathetic Heart Disease in 30 minutes, and speedily effects a cure. It is a peerless remedy for Palpitation, Shortness of Breath, Smothering Spells, Pain in Left Side and all symptoms of a Diseased Heart. One dose convinces. Sold by A. W. GRANGE & BROS.

Children at school are often abused and laughed at because of their "dullness," when the whole trouble is imperfect vision; for, although they are perfectly well when at play out-doors and quite well when they take up a book, they cannot continue to read for more than a few minutes at a time. Such children may sooner or later become cross-eyed unless the defect is properly corrected by an eye specialist. A. F. Chinneck is a graduate and will examine any eyes free of charge. F. CHINNECK'S Jewelry

Hill Finkle, of Newburgh, has one of the finest turnouts in this district. His flashy team and handsome rig were much admired on show day.

Relief in Six Hours.—Distressing Kidney and Bladder Diseases relieved in six hours by the "SOUTH AMERICAN KIDNEY CURE." This new remedy is a great surprise and delight on account of its exceeding promptness in relieving pain in the bladder, kidneys, back and every part of the urinary passages in male or female. It relieves retention of water and pain in passing it almost immediately. If you want quick relief and cure this is your remedy. Sold by A. W. GRANGE & BROS.

Cause and effect govern the physicians, hence they cannot recommend cure alls. If tea or coffee is the cause of your ill feelings, and nine times out of ten such is the case, particularly if it is the stomach, liver or nervous system, you cannot hope for permanent relief even though you sample all the patent nostrums in the market. Common sense says remove the cause, stop tea and coffee and drink cereal, a pure food drink made from grains. It is more fragrant than coffee and less than half the

THE ENTERTAINING VISITOR.

A Case in Which It Was Strongly Developed and Persistent.

There was a wistful expression on his face as he strolled to the box-office of the theatre. He stroked his beard with an assumption of nonchalance and said to the young man who was selling tickets:

"Be ye goin' ter hev anythin' goin' on here ter-night?"

"Yes, sir," was the answer. "We have a performance here every night."

"Crowded houses?"

"Oh, I guess we can find a place for you if you want to go in."

"I wouldn't want anythin' very expensive. 'Most any place 'ud do fur me."

"We can sell you a seat for twenty-five cents."

"That's rock-bottom prices, is it?"

"We can't give any discount on that."

"Wal I dunno. Would ye sorter do me a pus'nal favor?"

It was a dull day and the man in the box-office was a little lonely and to keep the conversation going, he answered:

"Yes, if you don't ask me to pass you into the show for nothing."

"I wouldn't make no sech request as that, I'm willin' ter pay fer my amusement, or go without. But would you take five two-cent stamps in part payment?"

"Yes. We can use them."

"An' I've got a dime with a hole in it. Would ye jes ez soon let that go in fur eight cents? That's a discount of two cents on account of the hole."

The ticket-seller was thoroughly amused by this time and he answered:

"Yes. Let's have it."

"That'll make eighteen cents. I reckon you'll want seven cents more."

"I'm afraid I will."

"Wal, here's the eighteen cents. I'll come around ter-night an' set down anywhere ye put me an' when ye think I've seen eighteen cents' wuth, ye kin send one o' yer hired men around an' notify me. I'll git right up an' go out an' there won't be any disturbance whatsoever."

"We can't do anything like that. You'll have to buy a ticket for the whole show or not go in at all."

"Wal, there's only one thing I kin offer ye. Ye can take yer choice. I'll give ye this here jack knife that I paid a quarter fur less'n a year ago, an' which only hez one blade out o' the three broke. Er I'll give ye this ten-cent piece of chewin' tobacco which I was goin' ter take home ez a present ter the hired man."

"I-I don't see how we can do anything like that."

"It 'ud be a great accommodation."

"All right," said the amiable ticket-seller. "Hand over the jack knife. And he threw him out a ticket."

"I know ye ain't runnin' no junk shop," the applicant said as he passed over the cutlery, "an' I'm much obliged ter ye fur makin' this exception. I hated ter go 'way without seel'n a theatre-show, but ef I was ter hev paid real money out an' out, I don't think Mehitabel would ever fergive me fur it. But the postage stamps 'ud likely hev got lost before I got a chance ter use 'em, an' I couldn't pass the dime, an' I've got another jack knife. So ez long ez I jes' traded in fur it, I kin enjoy the catin' with a clear conscience an' go home an' tell Mehitabel all about it."

Watering Stocks

"I hadn't never been ter Wall street, but when it comes ter waterin' stalks I jest reckon yer Uncle Hiram's in it."—Harper's Bazar.

Hood's Pills are the favorite family cathartic, easy to take, easy to operate.

While shooting at a target last week George Morden, of Deseronto, was accidentally shot in the leg.

Get the Best. The public are too intelligent to purchase a worthless article a second time, on the contrary they want the best! Physicians are virtually unanimous in saying Scott's Emulsion is the best form of Cod Liver Oil.

Piles Cured in 3 to 6 Nights.—Dr. Agnew's Ointment will cure all cases of Itching Piles in from 3 to 6 nights. One application brings comfort. For Blind and Bleeding Piles it is peerless. Also cures Tetter, Salt Rheum, Eczema, Barber's Itch, and all eruptions of the skin. 35 cts. Sold by A. W. GRANGE & BROS.

George Lloyd has bought a little experience in hot water fittings for heating purposes, having fixed his greenhouse over twice, and then put in steam, which is better than hot water sometimes and sometimes worse. George is now quite a fitter of hot water apparatus, and has just done a first class job for the editor, at his dwelling house.

Castoria is truly a marvelous thing for children. Doctors prescribe it, medical journals recommend it and more than a million mothers are using it in place of Paregoric, Bateman's Drops, so-called soothing syrups and other narcotic and stupefying remedies. Castoria is the quickest thing to regulate the stomach and bowels and give healthy sleep the world has ever seen. It is pleasant to the taste and absolutely harmless. It relieves constipation, quiets pain, cures diarrhoea and wind colic, allays feverishness, destroys worms, and prevents convulsions, soothes the child and gives it refreshing and natural sleep. Castoria is the children's panacea—the mother's friend. Castoria is put up in one size bottles only. It is not sold in bulk. Don't allow any one to tell you anything else on the plea or promise that it is "just as good" and "will answer every purpose." See that you get C-A-S-T-O-R-I-A.

The fac-simile signature of Dr. H. H. Hatcher. Is on every wrapper.
